CERTIFIED RELIABILITY

// ARBURG offers you a service contract for machine inspections at 12 or 24-month intervals. Proven and certified functionality results in fewer downtimes as well as lower machine wear. Thanks to preventive maintenance and the associated value retention, production becomes easier to plan. The results and measured values for each inspection are stored electronically and inalterably in a log book – including up to five consecutive testing cycles. Furthermore, you receive a test seal and a test certificate from ARBURG. For you, this means high machine availability and consistent production quality. //

ARBURG SERVICE GREAT BRITAIN AND IRELAND

The decisive resource for smooth
injection moulding production

ARBURG

Service allround: Comprehensively trained technicians ensure quick assistance at local level.

Regular recalibration: maintaining the reproducibility of the ALLROUNDER machines.

ARBURG Service allround

To discuss your calibration/inspection contract requirements please contact us by phone or email. Our service engineers are all extensively trained at our Head Quarters in Lossburg, Germany and we cover all locations in Great Britain and Ireland.

ARBURG service contract

The ARBURG service contract includes basic calibration of all quality-relevant parameters at 12 or 24-monthly intervals. This includes calibration of:

- Pump
- Injection pressure and speed
- Back pressure
- Screw position measurement
- Rotational dosage speed
- Locking pressure

The inspection is carried out with ARBURG testing devices according to ISO 9001.

Oil management

Hydraulic oils can become contaminated through air, water or solid particles. Contamination through solid particles in particular can cause severe surface damage to hydraulic components due to wear, e.g. by abrasion. The consequences are control inaccuracies, leaks, efficiency losses and reduced component service life. The objective of oil management is to prevent such contamination in order to increase the availability, reliability and, consequently, the efficiency of the injection moulding machine. Our Service personnel will be pleased to answer any queries. via e-mail: service_uk@arburg.com

Additional services

In conjunction with basic calibration, further services – with or without actual value recording – are also available:

- Position measurement calibration
- Mould platen parallelism check
- Testing of cylinder/mould temperature measurement chain
- Testing of mould cavity pressure
- Calibration of the additional control valves
- General visual inspection
- Safety check
- Oil analysis
- General actual value recording
- MULTILIFT
- THERMOLIFT T 100-2

Additional services that fall outside the scope of the service contract can be performed by ARBURG in consultation with the customer.
